

BMO Financial Group
Toronto, ON

To whom it may concern,

I am writing to express my interest for the Developer - Cyberark position at Inteliware. I learned about this insightful opportunity through LinkedIn. I will be completing my final year at Ontario Tech University, majoring in Software Engineering in April 2020. I am a creative and curious individual and am always looking to solve new problems to expand my knowledge within the technology field.

As an engineering student, I am motivated to work with peers in creating applications and software. This encourages me to effectively communicate and understand the opinions expressed from my group members and to give and receive feedback. I have created many applications within my courses and outside the classroom, such as a Python-based car simulator and a fitness mobile application, which are mentioned in my resume. These projects not only allow me to demonstrate my own strengths, but also, to comprehend my peers' strengths, my entrepreneurial attitude, and my ability to effectively work and collaborate with a team to strive for a common goal.

Apart from my academic life, my work experience has allowed me to gain vital skills. As an Application Developer intern at CIBC, I learned how to effectively work in a large team. I also gained a year of experience working in Java, MySQL as well as many time-management and collaborative coding skills. As an engineer, I am always curious and fascinated by problems that many try to avoid. I always attempt to find ways to optimize existing solutions using skills learned in school. I enjoy troubleshooting and debugging, since it allows me to solve problems and learn more about the product and how it functions. I currently maintain my own website, work tirelessly on autonomous driving capabilities in Python with well-known and capable libraries such as OpenCV and continue to experiment and create new applications and programs. I also love to modify existing applications, such as writing C# based mods for games such as Grand Theft Auto V.

In my free-time, I like to develop new applications as well as venture into photography. Though I would still consider myself a novice, I have developed quite a bit of knowledge in tools such as Photoshop and Lightroom. These skills often impact my code where I try to make my applications to look as visually pleasing as possible as well as giving the user an optimal user experience. I would often prototype using applications such as Adobe XD or Sketch to give myself a rough idea of what I want.

Gaining this position will surely help me in my career path towards becoming a successful Software Engineer. I can be contacted on my mobile phone number at (647) 294-3148 or through my university email at amalnnath.parameswaran@ontariotechu.net. Thank you for your time and consideration.

Sincerely yours,

Amalnnath Parameswaran
